»Alarm Systems

The best Intruder Alarm system can depend upon a number of factors. Different intruder protection systems provide a range of functionality and come at a range of prices.

All our intruder alarm systems are installed to PD6662; this means that the systems are insurance approved. They come with a certificate of compliance for insurance purposes, and also a 3 year warranty.

Intruder alarm systems are recommended to be serviced by an approved company every 12 months, or in some cases every 6 months depending on the grade of the system, and/or monitoring.

We install two types of intruder alarm systems, these are: Texecom Alarm Systems and AJAX Systems.
We are registered installers for both of these and either can be remote monitored.

AJAX Texecom

»AJAX Systems

Ajax is a new range of Intruder Alarm systems that are smart, reliable and lightening fast. It reacts to real dangers only, not to false alarms. If anything happens, Ajax will notify you in a heartbeat and help prevent troubles.

This system can connect devices from up to 2000 metres away and transmits alarms from detectors to the hub within 0.15 seconds. All devices have a battery life of up to 7 years and they encrypt data every step with a floating key encryption algorithm.

Indoor protection with motion, an opening or break detectors offer reliable protection to doors and windows that can be used to break into the premises. Outdoor protection motion detectors monitor the adjacent territory around the house and raise an alarm instantaneously when intruders approach.

Ajax quickly recognises the first signs of a fire, smoke or sharply increased temperature when the fire is burning without smoke. The smoke sensor can be tested by pressing a button on the device or through the mobile app. This system can also have a leak protect device integrated into this so this alerts you of the first sign of moisture; these are designed to operate in tough conditions to prevent water damage.

The detection devices on an Ajax system are wireless, easy to install and the panel has a possibility of four communication channels; the standard install includes Wi-Fi and ethernet, with a possibility of 2G and 3G. Ajax maintains a constant connection with the cloud server (with no service charge for this), it sends operation and incident reports to the smartphone.

INFINITE FIRE & SECURITY

»Texecom Alarm Systems

These types of systems can be wired or wireless depending on the system you require. Existing detection can be incorporated on to this system, or even a hybrid system can be better for some domestic households, a combination of wired and wireless devices.

Wireless Texecom systems bring together a range of multiple devices across a wireless network, and even from the most remote locations like garages and sheds. State of the art Ricochet mesh networking technology allows wireless devices to receive and repeat transmissions from all devices on the system.

Wired Systems are hardwired throughout the house and are very reliable, and can have the same functionality as a wired system. Texecom offer a range of coloured LED keypads, from traditional white to gunmetal grey, satin chrome, polished brass and diamond black.

Along with the system types, Texecom provides excellent fire and smoke detection as additions to your system.

Texecom Connect is an option to add onto either wired or wireless systems so you can control this directly from your smartphone or tablet.

Control the operation of your security system, receive notifications of system events and monitor activity from anywhere in the world. Through this you can do a whole range of things like automating lighting, controlling heating, power and electrical appliances.

»Monitoring

A monitored intruder alarm is essentially an audible intruder alarm with "monitoring" added as an additional service.

An audible alarm is just as it sounds, it makes an audible noise when activated. The purpose of this is to draw attention to the property and scare the intruder away. For many audible alarms, this is the limit as to what they can do.

This is where monitoring added to your system gives you peace of mind that when this is attached to an alarm receiving centre (ARC), would notify any key holders chosen when the alarm has been triggered.

It is their job to determine whether this is a confirmed alarm; (eg: A genuine intruder) or a mains failure etc. This is at an annual cost and all our systems are linked to East Midlands Monitoring Station based in Nottingham. This is an option obviously of your choice depending on your perceived risk.

»Fire Alarm Servicing

Fire alarms save lives. When you rely on something to that degree, it is vital you take steps to ensure it is ready to do its job should the need arise. It's precisely why fire alarm servicing is so important.

If you live in a 3 + storey home, we can service and maintain your fire alarm to give you the peace of mind that should the worst happen, the fire alarm will work and alert you to evacuate when needed.

We service domestic fire alarms to the British Standard BS5839, are fully accredited and issue full certification for you.

INFINITE FIRE & SECURITY

»CCTV

These days installing CCTV can be relatively inexpensive. Cameras, recording equipment and installation by an accredited installer is well worth the cost when looking at the benefits.

Key benefits of CCTV (Closed Circuit Television) systems can be peace of mind, deterrent and crime prevention, prosecution, remote monitoring, can be ideal to use in conjunction with intruder alarms and the possibility of reduced insurance premium.

Being fully accredited in design, installation and commission, we make sure that your system complies with the laws that govern CCTV. A full handover pack is supplied after every install and we are always on hand for any guidance throughout the design to finished installation.

Warranty

3 year warranties are supplied with any of our CCTV systems with the recommendation of servicing annually.

Registered Installer

All our equipment that we install is Dahua and we are proud to be a registered installer.
